

COLD NATURED BIKES

If (4 stroke) ATV, dirt bike, scooter or pocket rocket is cold natured(will not run properly when first started, especially in cold weather), this can be fixed with a simple adjustment.

1. Turn the air/fuel screw in all the way and then back it out 1/2 turn. (They are set 3 turns out from the factory)
2. Next back out the idle screw until it idles slow enough.
3. If it still doesn't run smoothly, back out the air/fuel screw 1/8 turn at a time and readjust the idle speed.
4. Continue until the engine operates smoothly.

SPARK PLUGS

NGK	C7HSA	GAP
ND	V22FS-V	.028-.032 (.030)

METRIC CONVERSIONS

mm to inches : mm * .0394 (ex: .15mm * .0394=.0059")

inches to mm : inches * 25.4 (ex: .006" x 25.4 = .1524 or 15mm)

ELECTRICITY

Power (watts) = Current(Amps) * Voltage (ex: 120V * 2A = 240W)

Appliance	Typical Watt Used	Appliance	Typical Watt Used
Blender	386	Large Microwave Oven	1450
